DETAILED ACTION

Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in response to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-6, drawn to a method for treating inflammatory liver disease comprising administering a selective inhibitor of cyclooxygenase-2.

Group II, claim(s) 7-11, drawn to a method for treating virus-caused liver disease comprising administering a selective inhibitor of cyclooxygenase-2 and a antiviral agent.

Group III, claims 12-16, drawn to a selective inhibitor of cyclooxygenase-2 which inhibits the enzyme and the synthesis of the enzyme.

2. The inventions listed as Groups I-III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

Groups I and II are not so linked as to form a single general inventive concept because the methods are directed to different diseases and different steps are involved in the method.

Particularly, hepatitis A would not read on the inflammatory liver disease cited in group I since hepatitis A may not be inflammatory. On the other hand, alcoholic liver injury or autoimmune hepatitis cited in Group I are not encompassed by virus-caused liver disease in Group II.

Art Unit: 1617

Group III and Groups I and II are not so linked as to form a single general inventive concept because the compounds claimed in group III are structurally distinct from the compounds employed in group I and II. Further, the functions of these compounds may also different, e.g., selectively inhibiting cyclooxygenase-2 vs. selectively inhibiting cyclooxygenase-2 and inhibiting the synthesis of cyclooxygenase-2.
